- (54) Title of the Invention:

 Apparatus for Preventing Entanglement of Welding Wire

(57) Claims

1. An apparatus for preventing entanglement of a welding wire comprising:

a disk-shaped pressing member (3) having a "T" shaped cross section, and provided to restrain the upward elastic force of a welding wire (2) wound cylindrically inside a cylindrical pack container (1) and apply a predetermined degree of tension to the wire being drawn to the outside; and

a conical wire guide member (6) having a slanted "]" shaped cross section, placed outside the pressing member (3) to a predetermined gap (L), the wire guide member (6) having a support part (4) and a guide part (5).

- \star Published on the basis of the original application
- < Brief Description of the Drawings >
- FIG. 1(a) is a longitudinal-sectional view illustrating a welding wire wound in a container;
 - FIG. 1(b) is a cross-sectional view of FIG. 1(a);
- FIG. 2 is a perspective view of a wire guide member and a wire pressing member of the invention; and
- FIG. 3 is a partially broken perspective view of a wire guide member installed according to the invention.
